ABSTRACT

A method of manufacturing a liquid crystal display panel,
comprising the steps of: forming a plurality of pixels on a first
substrate; forming a plurality of micro cell structures on the
5 first substrate, wherein each micro cell structure surrounds at
least one pixel; forming a first alignment layer on the first
substrate; providing the micro cell structures with a liquid
crystal by utilizing Ink Jet Printing technology; and combining
the first substrate with a second substrate by forming a sealing
10 member therebetween.
